TOOLS

- Programming Languages: JavaScript, TypeScript, Java, Python, C++.
- Front-End Development: HTML, CSS, Vue.js.
- Back-End Development and Environments: Node.js, Express, Deno.
- Databases: SQL, PostgreSQL.
- Version Control: GitHub, GitLab.
- Additional Technologies: WebSockets.
- Design / Prototyping: Figma.
- Office Suite: Microsoft Office.

CORE COMPETENCIES

- Strong calculation and mathematical skills.
- Analytical skills and ability to quickly learn new technologies.
- Ability to work under pressure.
- Teamwork.
- Adaptability and strong interpersonal skills.
- Proactive.
- Knowledge of Object-Oriented Programming (OOP) and data structures.
- Knowledge of software architecture and design.
- Database knowledge, design, and management.

LANGUAGES

SPANISH	Native
ENGLISH	B2 Level

ABOUT ME

I am focused on continuously seeking experiences for both my personal growth and professional development. As a dedicated and upbeat student, I maintain a positive attitude and a strong willingness to learn. Technically, my greatest interest and passion lie in Front-End development; however, I am also highly comfortable and capable working in a Full Stack role. My values of honesty and responsibility drive me to give my best to every task. I consider myself a dedicated, disciplined individual with a strong aptitude for teamwork.

EXPERIENCE

WINNING TEAM MEMBER

Digital Banking Challenge for the Youth Segment (Banesco) 2024

Enthusiastically participated as a member of the winning team for the Banesco Digital Banking Challenge. Together, we designed an innovative value proposition for a banking app, integrating strategic analysis (Lean Canvas) and an attractive prototype design (Figma).

PROJECTS AND APPLICATIONS

Web Platform for Travel Agency (Full Stack)

Technologies: Vue.js, Node.js, Express, PostgreSQL.

Comprehensive development of an e-commerce platform for tourist services, focused on providing an excellent user experience:

- Built an interactive and visual interface using Vue.js, highlighting a multi-step purchase flow and dynamic administrative panels.
- Developed the server (backend) with Node.js, using the Express framework to facilitate the connection and communication of the system with the database.
- Designed the relational database from scratch using PostgreSQL, implementing business rules (Stored Procedures) to validate complex purchase conditions in real time.

Real-Time Multiplayer Web Game: Battleship (Full Stack)

Technologies: HTML, CSS, JavaScript, Node.js. Comprehensive development of an interactive web game, focused on live interaction:

- Designed the visual interface and client logic (Front-End) from scratch using HTML, CSS, and JavaScript, implementing interactive boards and advanced mechanics such as the use of power-ups.
- Built the server architecture (Back-End) using the Deno runtime environment and integrating WebSockets to establish fluid, bidirectional communication in real time.

Web Order Management System (Full Stack)

Technologies: Java, MVC, HTML, CSS, JavaScript, SQL. Comprehensive development of a web platform for the administration of orders, customers, and products:

- Built the visual and interactive user interface using HTML, CSS, and JavaScript to facilitate management for users.
- Designed the server architecture (Back-End) in Java, implementing the MVC design pattern to ensure clean and scalable code.
- Ensured robust and secure handling of commercial information by efficiently integrating the system with a relational database.

EDUCATION

COMPUTER ENGINEERING STUDENT

Universidad Católica Andrés Bello (UCAB)
(2022 -PRESENT)

HIGH SCHOOL DIPLOMA IN SCIENCES

Colegio Don Bosco - Altamira
(2011 - 2022)
