SUMMARY

Computer Engineering student at UCAB, graduating in 2027. I build web applications end to end: Vue 3 and React on the frontend, Node.js and Java (Spring Boot 3) on the backend, and PostgreSQL for data. I also use Python for AI and automation, and work daily with AI coding assistants. Looking for an internship or junior role, remote or in Caracas.

EDUCATION

Universidad Católica Andrés Bello (UCAB) — Caracas, Venezuela
B.S. in Computer Engineering — 2022 – 2027 (expected)

Languages: Spanish (native), English (B2, professional and technical).

TECHNICAL SKILLS

Frontend: Vue 3, React, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Vite
Backend: Node.js, Express, Deno, Java (Spring Boot 3, Spring Data JPA, Maven), Python (Flask), REST APIs, WebSockets, gRPC
Databases: PostgreSQL (PL/pgSQL, stored procedures, triggers), SQLite, H2, MongoDB
AI & Data: TensorFlow, Keras, Scikit-learn, Pandas, Monte Carlo Tree Search, LLM APIs (Claude, OpenAI)
Tools: Docker, Git/GitHub, Linux, cron, Scrum
AI-assisted dev: Claude and Gemini for day-to-day coding, debugging and learning new technologies

ACADEMIC & PROFESSIONAL PROJECTS

Team projects.

VEinteligente, Puntos Internet Web | Python, REST APIs, SQLite, Linux
- Wrote Python jobs that pull data from external REST APIs (Starlink) into SQLite on a Linux VPS, scheduled with cron.

Viajes UCAB | Vue 3, Express, PostgreSQL, PL/pgSQL
- Built a full stack travel booking system with a Vue 3 frontend, an Express API and a PostgreSQL database.
- Moved business rules into stored procedures and triggers, and generated PDF reports from the database on a cron schedule.

Batalla Naval Multiplayer | Deno, WebSockets, JavaScript
- Built a real-time multiplayer Battleship game with server-side game state and several rooms running at once.
- Kept both players' boards in sync over WebSockets, handling moves that arrive at the same time.

B2B Aldebaran Platform | Java 23, Spring Boot 3, Spring Data JPA, H2
- Built a REST API for order and inventory management, with an embedded H2 database and web views served by the same backend.

Connect6 AI Agent | Python, TensorFlow/Keras, MCTS, gRPC, Docker
- Trained a Connect6 agent through self-play, combining a neural network with Monte Carlo Tree Search and tactical heuristics.
- Served the model as a separate gRPC service in a Docker container, apart from the game engine.

Secure Firmware Portal | Python, Flask
- Built a Flask app for firmware management around OWASP Top 10 risks: PBKDF2 password hashing, HMAC-SHA256 signatures, and input validation and sanitization against code injection.

AWARDS & CERTIFICATIONS

First Place, Banesco Digital Banking Challenge — 2024
- Designed a value proposition for a banking app using Lean Canvas and rapid prototyping in Figma.

Fortinet Certified Fundamentals in Cybersecurity (NSE 1 & NSE 2) — 2026
